

As a truck driver, XM radio is a positive tool. The XM Instant Traffic and Weather gives me a heads-up on what to expect in the area I am travelling. The NAB's petition 04-160 (HR4026) would limit the use of XM Instant Traffic and Weather and deminish its functions. If this petition is accepted, it would also open Pandora's Box on what they feel they should have control over and censure.

My opinion as a XM customer is as follows:

1. I pay for the service. It is my choice to listen to what is provided.
2. XM Radio and it's channels are not free services as public radio and must be wanted to be listened to.

It is my vote that Petition 04-160 (HR4026) be rejected and XM not be censured by our government. I understand there are limits, but the limits the FCC and petition 04-160 (HR4026) are trying to set are unrealistic and limit a function that helps in the safety of drivers and the public.

Thank you for taking my thoughts into consideration.
